AVINEON®

Visualize IT. See IT Through.

EASILY FILTER MAP CONTENT AND RELATED RECORDS

DISPLAY MANAGER

ArcGIS WebApp Builder Widget

Display Manager makes it easier to filter the display of both map content and related features, such as annotations.

Features can be selected based on attributes, like feeder number or work order number. In addition, views can be saved and shared among users in display libraries for future use.

Business Problem

- Map content is difficult to find and filter

- Map templates vary since they are often customized and then printed, not stored

Business Solution

- Reduce customized templates and dependency on paper maps

- Create and store maps

- Find and filter map content

FIND AND FILTER MAP CONTENT

CUSTOMIZE MAP TEMPLATES

REDUCE DEPENDENCY ON PAPER MAPS

ACCELERATED ABILITIES

USE-ABILITY

### SCALE-ABILITY

ACCELERATE FOCUSED ABILITIES OF YOUR GIS

Our purpose-built Ability Accelerators provide a simplified approach to improve collaboration and deploy widely used functionality. Our tools are focused on accelerating your ability to derive value from your GIS by improving the use-ability, interoper-ability, and scale-ability of your GIS.
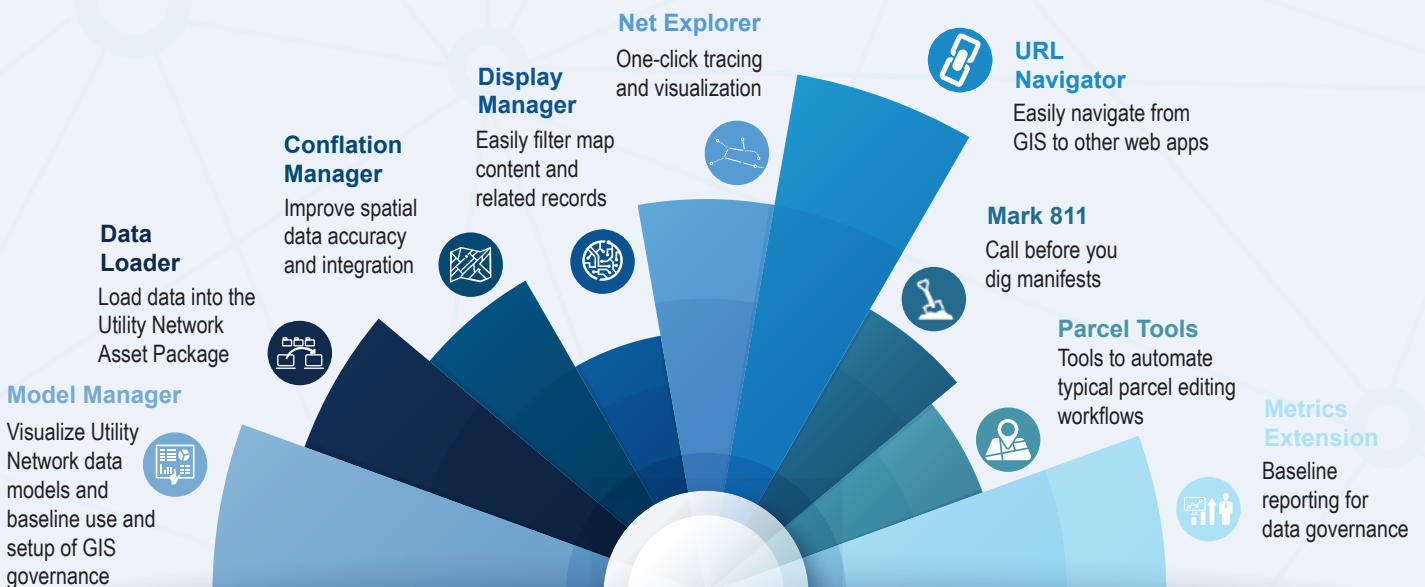

USE-ABILITY

INTEROPER-ABILITY

SCALE-ABILITY

Net Explorer
One-click tracing and visualization

Display Manager
Easily filter map content and related records

Conflation Manager
Improve spatial data accuracy and integration

Data Loader
Load data into the Utility Network Asset Package

Model Manager
Visualize Utility Network data models and baseline use and setup of GIS governance

URL Navigator
Easily navigate from GIS to other web apps

Mark 811
Call before you dig manifests

Parcel Tools
Tools to automate typical parcel editing workflows

Metrics Extension
Baseline reporting for data governance

Supported by comprehensive managed data services to unburden both your organization and budget, allowing you to augment your operations.
